## A Series

**Overview**[A5](#)[A4K Limited](#)[A3](#)[A1](#)[Gallery](#)[Videos](#)[Specs](#)[Downloads](#)

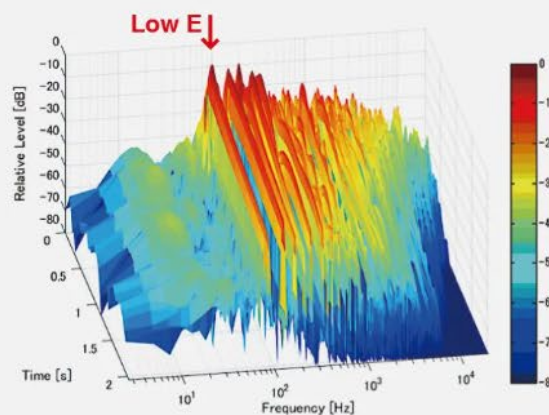

# Powerful Acoustic Sound

A Series guitars are louder and stronger in the low-mid ranges thanks to cutting-edge acoustic analysis technology developed by the Yamaha R&D Division, which led to the addition of scalloped bracing for the top and shorter bracing than normal for the back.

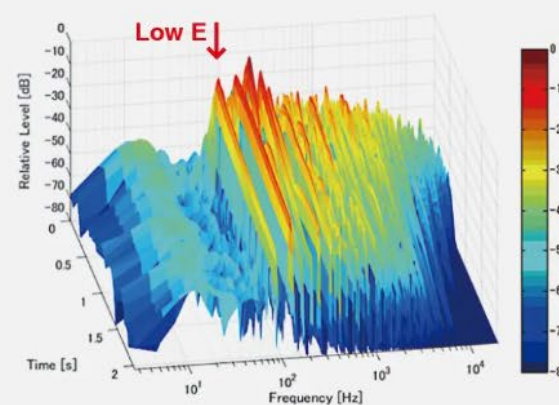

Also, to give the instrument a rich, vintage-quality tone, the tops are treated with the exclusive, Yamaha Acoustic Resonance Enhancement (A.R.E.) process, making it sound as though the instrument has been played for years the first moment you pick it up.

\*A.R.E. processing is only applied to A5 and A3 Series guitars

## Scalloped Bracing

## Conventional Bracing

Overall increases across the lower range. Richer harmonic overtones in the mid range.
